Version 1.0.0

Release date   January 2024

- Initial version of PINT A-NZ Self-billing Process

NOTE - The following issues have been identified as known defects and will be corrected in a future version:

- **cbc:IssueTime** is incorrectly shown on each transaction page although it is not used in the PINT A-NZ specifications, and should be disregarded
- **cac:PaymentTerms/cbc:Note** is incorrectly shown in the syntax model with a cardinality of 0..1, however, the element is mandatory if the optional 'parent' **cac:PaymentTerms** is provided (as **cbc:Note** is the only element in the class)
- where the syntax model shows 'VAT', it should be taken to mean 'GST'
- Credit Note Transaction – where the term 'Invoice' is used in the Credit Note model & rules, it should be taken to mean 'Credit Note'
- rules listed on data model detail pages currently show only the Shared rules and not the Jurisdiction-specific/Aligned rules (all rules can be accessed via the Schematrons page)
- Tax exemption reason code list (PINTtaxEx) is shown, but not used for A-NZ PINT specialisation
